PROFIL

A full-stack developer focused on AI-first product development and multi-agent system design. Experienced in building scalable, production-grade backend services and user-facing applications using TypeScript, React Native, Python, Flask, and SQL, with deep involvement in system integration and production operations.

Currently working on multi-agent architectures coordinating large language models to automate and enhance complex content workflows, with a strong focus on system architecture, problem solving, and translating business requirements into reliable, high-impact technical solutions.

ARBETSLIVSERFARENHET

AI Systems & Fullstack Developer – SoMe Software

Oktober 2025- Current

- Developed and maintained a multi-agent AI system for content creation, refinement, and orchestration across multiple product features
- Integrated LLMs into production backend services using TypeScript, ensuring reliability and predictable outputs
- Modeled and optimized PostgreSQL schemas to support AI-driven features at scale
- Built AI orchestration workflows supporting content generation, validation, scheduling, and publishing
- Participated in code reviews, feature branching, and CI/CD workflows

Team Leader, Hello World! (Online)

Oktober 2024 - Maj 2025

- Led and coordinated a team of programming instructors, with responsibility for planning, execution, and quality
- Mentored instructors and provided ongoing feedback and coaching
- Ensured a safe, inclusive, and supportive environment for young learners

SELECTED PROJEKTS

CAD Assembly Analysis & AI Agents (Multi-Agent System)

Jan 2026 - now

- Designed and built a multi-agent AI system for analyzing CAD assemblies (STEP files)
- Implemented structured parsing + LLM-based reasoning over mechanical assemblies
- Collaborated closely with a mechanical engineer to align AI outputs with real-world engineering workflows
- Enabled engineers to query assemblies using natural language (e.g. part count, largest components, recommended views for 2D drawings)

Queue, Strängnäs Salong

Jul 2024 - Nov 2024

- Developed a full-stack web application using Flask and Python to manage digital customer queues for a barbershop.
 - Integrated the Gmail API to automate notifications when a customer's turn was approaching.
 - Technologies used: Python, Flask, SQLite, Gmail API, HTML/CSS, Heroku.
-
